Primary Care Psychiatry Fellowship

About Us

Primary Care Psychiatry Fellowship a comprehensive certificate program designed to address the most frequently encountered mental-health related disorders and treatments. The goal of the UC Irvine/ UC Davis Train New Trainers Primary Care Psychiatry (TNT PCP) Fellowship is to provide mentorship and training in the area of primary care psychiatry. This is not a traditional or ACGME-approved fellowship. This year-long clinical education certificate program is intended for primary-care oriented trainees and providers interested in advanced training in primary care psychiatry. Trainees will learn how to complete an efficient and evidence-based psychiatric interview in the busy primary care or medical setting. They will also be trained to effectively diagnose and treat commonly encountered psychiatric conditions such as mood, anxiety, psychotic, and substance misuse disorders. Most importantly, trainees will learn how to teach these principles to their primary care colleagues.

Multi-faceted Curriculum

The following is an outline of the curriculum, developed by the UC Irvine / UC Davis faculty. It includes more than 50 required hours of training, resulting in a certificate of completion from UC Irvine Department of Psychiatry and Human Behavior:

- Two weekend in-person teaching sessions (approximately 25 CME hours)
- Live, case-based discussions with a focus on integrated primary care psychiatry twice a month (at least 20 CME hours)
- One hour per month of small group mentoring sessions with a TNT fellowship faculty member or mentor

This activity series has been approved for *AMA PRA Category 45 Credits™*.

Reading materials will be provided. Emphasis will be placed on how to provide culturally and linguistically competent and person-centered clinical care. Pre, mid, and post-testing will measure practice patterns and general knowledge in primary care psychiatry.

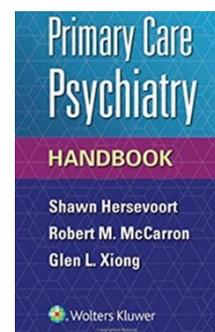

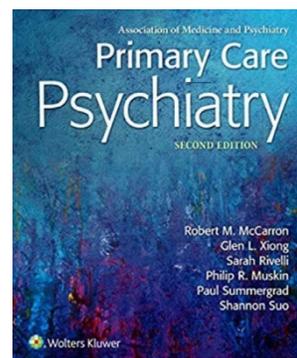

2021 Tuition: \$15,500

Past Fellows Include:

- MDs
- DOs
- NPs
- PAs
- Clinical Pharmacists
